PROJECTS

Externalized Properties -
<https://github.com/joeljeremy7/externalized-properties>
A open-source, lightweight, and extensible library to resolve application properties from various external sources.

Deezpatch - <https://github.com/joeljeremy7/deezpatch>
An open-source, simple, and performant message dispatch library (up to 15x faster than other existing solutions)

XerProjects - <https://github.com/XerProjects>
A collection of open-source C# libraries that aim to help developers build Command-Query Responsibility Segregation (CQRS) applications.

Internal Merchant Onboarding Platform
since March 2021

Joined Maya's internal merchant onboarding platform team which builds services that are used to onboard vendors/merchants to a plethora of their FinTech solutions/products. The platform integrates with various internal systems as well as external payment solutions such as Alipay, ShopeePay, and many more to make the system work.

Contact Center Telephony Applications / Services
July 2018 - March 2021

Joined an IBM client's (Banking/Insurance industry) team in building the company's Computer-Telphony Integration (CTI) applications and services. Our team worked on developing an easy-to-use desktop application where customer support agents can receive, transfer, or monitor calls as well as the back-end services that enables such features.

Navitaire Common Architecture
January 2016 - July 2018

Joined Navitaire's internal technical architecture team which manages Navitaire's vertical infrastructure services that are used across multiple teams.

Booking and Payments Platform
January 2016 - July 2018

Joined Navitaire's booking and payments team to work with various US-based and Philippine-based airline clients in building and evolving Navitaire's in-house reservations and payment processing solution. Our
